

POST FRAME TRIM SELECTION GUIDE

Your Roof. For Life!
On Time and Complete!™

1. Ridge Roll - Caps off roof peak, prevents leaks.

2. Ridge Cap - Caps off roof peak, prevents leaks.

3. Rake Trim - Seals off where end wall panels meet roof panels, prevents leaks.

4. Gable Trim - Seals off side of building where roof meets end wall, prevents leaks.

5. Double Angle - Connects two side wall panels.

6. Rake & Corner Trim - Seals off building outside corners.

7. Base Angle - Starter strip for panels at base of building.

8. Drip Cap - Seals off end of panel above a door or window.

9. Overhead Door Trim - Combination piece caps off panel edge and covers door jamb.

10. Inside Corner Trim - Seals off building inside corners.

11. Side Wall Trim - Protects against leaks where a side wall connects to a lower roof.

12a. Cannonball Track Cover - Conceals sliding door track, protects track from corrosion.

12b. National Track Cover - Conceals sliding door track, protects track from corrosion.

13. Fascia Trim - Conceals rafter edge. Also used to cover door jambs.

14. Eave Trim - Conceals rafter end for a building with a small eave over-hang.

15. J-Channel - Caps off panel edges. Commonly used around doors and windows.

16. End Wall - Protects against leaks where an end wall connects to a lower roof.

17. One Piece Fascia & Soffit - Conceals rafter edges for a building with a 12" overhang.

18. Jamb Trim - Used in door opening for overhead & sliding doors.

19. Transition Flashing - Protects against leaks at a pitch change.

20. Gambrel Flashing - Protects against leaks at a pitch change.

21. Preformed Valley - Directs rain water run-off where two roof slopes form a valley.

All trims are 10' in length unless otherwise noted.
