☐ SL175 Smooth Profile

☐ SL175 2-Pencil Rib Profile

☐ SL175 2-Bead Mesa Rib Profile

NON-STRIATED PANEL DISCLAIMER:

The perceived waviness in flat metal commonly known as "oil-canning" is an inherent part of light gauge cold formed metal panels. Stiffening ribs and striations located in the flat pan of roof panels are means of reducing this condition. Striations break up the flat portions of the panel and minimize the visual perception of oil-canning. Flat-pan panels supplied by Union are inherently susceptible to oil-canning due to the wide, flat surfaces.

Union Corrugating Company will not accept "oil-canning" as cause for rejection of panel system; Union Corrugating will not be liable for labor related to removal or installation of panels if a materials claim is filed.

By signing below, I understand that waves and other surface variations are not reason for rejection of flat pan roof panels provided by Union Corrugating Company. I understand that non-striated panels are more likely to exhibit these characteristics.
